Education

The National Institute of Engineering

B.E. in Computer Science and Engineering (AI & ML)

2024 – 2028

CGPA: 9.33

Technical Skills

Languages: C++ (Data Structures), JavaScript (ES6+), TypeScript, Python, SQL, Java

Frameworks & Libraries: React.js, Node.js, Express.js, Vite, Framer Motion, Tailwind CSS

Cloud & Tools: Docker, Git/GitHub, Postman, MongoDB, PostgreSQL, Firebase

Specialized APIs: SerpAPI, Apollo, Crunchbase API, WhatsApp Business API, WebSockets

Experience

OWASP NIE Student Chapter

Technical Core Team Member

2025 – Present

NIE, Mysore

- Architected and managed technical infrastructure for campus hackathons and developer workshops.
- Spearheaded Git/GitHub onboarding sessions for 100+ students, focusing on branching strategies and PR workflows.
- Collaborated with cross-functional teams to automate event registration and participant tracking systems.

Projects

LeadForge | Python, SerpAPI, Apollo, Crunchbase, Automation

2026

- Engineered an AI-powered B2B lead generation pipeline that automates prospect sourcing and lead scoring.
- Developed a multi-phase enrichment engine utilizing **SerpAPI** for job-board scraping and **Apollo** for firmographics.
- Implemented custom intent signals (is_hiring, funding_stage) to increase lead quality and outreach accuracy.

RSB Secure (Visitor Management) | Node.js, JWT, WhatsApp Flow, MongoDB

2025

- Architected a secure visitor management system replacing legacy paper logs with an automated digital capture flow.
- Integrated **WhatsApp Business API** for real-time host notifications and guest check-in affirmations.
- Designed a high-security admin dashboard using **JWT Authentication** and role-based access control (RBAC).

Intrusion Detection System | ESP32, Trilateration, C++, Embedded Systems

2026

- Designed a hardware-based system to detect and locate unauthorized devices within a localized signal range.
- Implemented a **Trilateration Algorithm** in C++ to estimate real-time coordinates using RSSI data from ESP32 nodes.
- Optimized low-latency mesh communication between microcontrollers for resilient network-wide detection.

Citizen Resolver System | React, Vite, Tailwind CSS, REST APIs

2026

- Built a civic support portal with a focus on seamless status tracking and organizational resolution workflows.
- Developed modular React components with **Framer Motion** for an interactive, dashboard-driven user experience.
- Structured backend-ready data contracts for JWT-based auth, CRUD operations, and real-time notifications.

Achievements

- **LeetCode:** Solved **350+ DSA problems** with a focus on Medium/Hard difficulty in Graphs, DP, and Trees.
- **Hardware Hackathon:** Finalist for the Intrusion Detection System project (2026).
- **Open Source:** Active contributor to community EdTech tools (Skillnest) and civic systems.

Relevant Coursework

- Data Structures and Algorithms Operating Systems Database Management (DBMS) Computer Networks OOP
